### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. William J. Bond on October 19, 2006.

The application has been amended as follows:

Claim 5, line 2, "mushroom" has been deleted; and

Claim 8, line 2, "mushroom" has been deleted.

The following is an examiner's statement of reasons for allowance: Kalleberg (US 4290174, figures 2, 4) is the closest art of record and teaches hook strip structure including monofilament stems 13 with mushroom heads consisting of a longitudinally oriented polymeric material and a backing 12. In regard to claim 1, the differences are that Kalleberg fails to teach "a homogenous flexible backing" (line 2) with the concomitant array of upstanding stems "integrally formed" (line 3) with the backing, wherein the backing has "a thickness of from 0.1 to 0.5mm" (line 3) and the "stems having a molecular orientation as evidenced by a birefringence value of at least 0.001" (line 6). While Nealis (US 3270408) teaches a mushroom strip structure with a homogeneous flexible backing with the array of upstanding stems integrally formed with the backing wherein the stems and backing are made from conventional molding or casting techniques because it is a simpler form which can be easily and inexpensively produced (col. 1,

lines 16-22; col. 2, lines 6-21) and Rajala et al. (US 4861399) teaches a mushroom strip structure with the substrate having a thickness of approximately 0.254 mm (~0.01 in.) so as to be light and flexible (col. 10, lines 25-31, 45-49), there is no suggestion to modify the fastener of Kalleberg to incorporate the claimed combination of features with the longitudinal orientation of the polymeric material having an orientation evidenced by a birefringence value of at least 0.001.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Brittain whose telephone number is (571) 272-7065. The examiner can normally be reached on M-F 5:30-2:00.
